

DBK Royalty

DiamondBack

First things first. How can you 25, 250 or 2500X on a stable coin?

This offering is for royalty. A percentage of gross revenue. A percentage of every token sold for the first 25 years of the project. You can elect to receive your royalty payments in crypto or fiat.

Simple

EVERYONE, EVERYWHERE, EVERYDAY

20 Million USD equivalent is available for royalty purchase. This will be the only royalty purchase ever offered. 1000 (One-thousand) units at 20K USD a piece, payable in ETH or USDC. The sum of these units entitles owners a grand total of 5% gross revenue. *Check Socials for temporary availability of Royalty Tokens under the 20k unit price.

Simulated bonding curve:

EVERYONE, EVERYWHERE, EVERY DAY

The first participants to buy the tokens get the lions share or the rewards until the tokens are sold out. For example, if 2 million of the 20 million tokens are sold, the owners of those 2 million tokens will get the entire 5% of all token sales until the royalty tokens eventually sell out and rewards are then divided evenly to the token holders.

*A total of 1000 units are
being offered:*

If 1 Billion DBK Tokens are sold:

50 Million USD or USD equivalent is paid to royalty owners.

10 Billion Tokens sold: 500 Million is paid to royalty owners.

100 Billion Tokens sold: 5 Billion is paid to royalty owners.

1000 Billion Tokens sold: 50 Billion is paid to royalty owners (2,500X)

EVERYONE, EVERYWHERE, EVERYDAY

Per unit (20K USD purchase) breakdown:

Suppose 1 Billion DBK Tokens are sold: 50 Thousand USD or USD equivalent is paid to royalty owners (per unit owned).

10 Billion Tokens sold: 500 Thousand paid to royalty owners (25X)

100 Billion Tokens sold: 5 Million paid to royalty owners (250X)

1000 Billion Tokens sold: 50 Million paid to royalty owners (2,500X)

EVERYONE, EVERYWHERE, EVERYDAY

*Why is 1000 Billion,
Also known as 1 Trillion Tokens
on the table as a possibility?*

DBK is inflation proof
currency

1 USD

Each DiamondBack token will always be priced at 1 USD. People who hold DiamondBack tokens (called DBKs) earn more DBKs while they hold the token. The assets associated with DBKs will grow in USD value if inflation occurs. Therefore, DBK is inflation-proof currency. USDT and USDC and any FIAT issued currently by governments will inflate and erode in value over time. For every DBK that is minted, there is an equivalent value of extremely rare high-end diamonds placed in a third-party trust vault with Brinks. These diamonds are evaluated by Gemological Institute of America, insured by Lloyds of London, and audited by PricewaterhouseCoopers. When this occurs, these diamonds are taken off the market forever, which automatically reduces the supply of these rare diamonds, creating a self-fulfilling prophecy where the price and availability of this diamonds function like a token burn.

Create

DiamondBack created something that has never been done before in crypto: a currency that businesses and people can use to transact without volatility of inflation. The price never fluctuates. Fluctuating cryptos will never be the currency of choice for everyday people and businesses. Businesses need to be able to make budgets with the payment methods they use and accept.

1000 Billion, or 1 Trillion Market Cap is not out of range for DiamondBack. This is less than 1% of the global cash equivalents. DiamondBack already has interest from royal families (see press releases and proof on the website), interest from insurance companies to buy hundreds of millions of tokens once we establish the retail market etc. etc. etc.

Market Cap

FOR EVERYONE, EVERYWHERE, EVERY DAY

People in developing countries need DiamondBack. DiamondBack already has relationships with small countries that are open to adding DBK as a secondary accepted currency for their citizens.

Secondary Currency

Why?

Why sell royalty? So far, DBK has been self-funded by founders and friends and family. We have had VC offers etc., but we have a specific 50+-year plan for this project. Our plan to empower the people and not just large institutions would be corrupted by accepting the wrong type of corporate investors. We see the potential move from bull market to bear as the perfect time to launch our currency solution and wish to accelerate this launch and promotion as soon as possible.

Standards

EVERYONE, EVERYWHERE, EVERYDAY

DiamondBack is designed for Everyone, Everywhere, Everyday. We do not aim to be single global currency. We think centralization of this type is extremely dangerous. However, DiamondBack offers the best solution available in the marketplace now for the global financial crisis. Ultra-rare high-end diamonds have appreciated consistently since their prices have been tracked. Gold and silver prices are artificially suppressed. Ironically, we already have gold, timber and oil groups looking to use our tokenization model to tokenize their assets. These other assets give us the opportunity to go beyond Diamonds, as there are 14 Billion dollars' worth of diamonds produced per year, and most of them are below our standards.

Appreciation

EVERYONE, EVERYWHERE, EVERYDAY

DiamondBack can expand to meet any demand by tokenizing many types of assets. People who hold DBK receive rewards by an increase in the number of tokens in their wallet as they hold the DBK tokens over time. The price of DBKs always stays the same. This innovation creates a token that provides appreciation in a unique way and holds its purchasing power as time goes by.

Income

EVERYONE, EVERYWHERE, EVERYDAY

Let's assume you have made 100's of thousands or millions of dollars in the crypto markets. We all know how these markets work. There is a bubble, and then a bear market. We all need something we can go into that creates generational income with the gains we lock in during the bull market. Many of other solutions offered to secure your crypto gains are too volatile and there is not a seamless way to buy into them. Buying into real estate and many other assets with cryptos can be problematic in terms of tax planning etc.

Big Picture

Look at the top crypto currencies right now. The currencies that have a 10 Billion market cap and above are mostly copies of each other. Do these currencies have any advantage in the real world for the average person over DiamondBack? The answer is no. The average person has no use for Bitcoin or Ethereum, but literally everyone has a use for DiamondBack. Therefore, we see that DiamondBack can easily grow to be one of the top market cap cryptos in the next year or two.

Real World Usability

EVERYONE, EVERYWHERE, EVERYDAY

Mainstream

Everybody needs money. Not everyone is going to speculate and buy cryptos like most of us have. DiamondBack has top 5 security law firms on retainer. Millions have been put into this project to prove its feasibility. The next step is creating a retail community and social media following, as well as raising the next set of funds for promotion and education so that DBK can be adopted by the mainstream.

EVERYONE, EVERYWHERE, EVERYDAY

A person stands on a large, dark rock on a beach, looking out at the ocean under a dramatic, cloudy sky. The person is silhouetted against the bright sky. The ocean is visible in the background, and the sky is filled with soft, white clouds. The overall mood is contemplative and serene.

Financial Solutions

DBK will operate on all relevant and safe blockchains. As inventive and amazing as Ethereum, and other blockchain solutions are, DBK will use all of them, and will have much more mass appeal in general than “traditional” cryptos. People will not buy DBK to get rich overnight. They will buy it to make between 5 and 25% a year on their funds. They will buy it to have a currency that is not volatile and preserves their purchasing power. People are not going to speculate on DBK like they do on crypto like we have. However, DiamondBack has the potential to be more widely adopted than other crypto tokens for the reasons listed above and many more. Everyone from the house cleaner in Honk Kong who wants to send funds back home to the Philippines from Insurance Linked Securities looking to buy DBK at a clip of 200M to 700M at a time have expressed interested in DBK. The founders are offering this sale in order to maintain DiamondBack’s vision and have the capital such that DiamondBack can reach its goals without compromise. We have created a financial solution that everyone could use, which utilizes Blockchain and old-world assets to substantiate the DBK value. With business process patents pending, DBK has unique advantages as a first mover in its business model.

Portfolio

EVERYONE, EVERYWHERE, EVERYDAY

The people who will have the biggest upside on this project are the people privileged enough to read this document.

In order to secure your position, purchase a unit(s) of 20k minimum, there is a maximum of 1000 units available. *Check Socials for temporary availability of Royalty Tokens under the 20k unit price.

Participation

EVERYONE, EVERYWHERE, EVERYDAY

DiamondBack has been licensed in multiple countries, has multiple legal opinion letters, and has completed all the steps needed to pave the way to have a successful and legal worldwide launch. All sales of the DBK tokens are easily tracked on the blockchain. You will receive a fraction of each direct sale via the DBK app or DBK exchange wallets on all exchange listings payable to you in USD, or crypto. After the 1000 units are sold, royalty will not be offered for sale again from DBK in the future, as the focus of the company will turn towards DBK token sales only going forward.
